Kayvan Zahiri

kzahiri@dons.usfca.edu linkedin.com/in/kayvan-zahiri github.com/Kayvan-Zahiri kayvan-zahiri.github.io/Portfolio

AWS and GCP-certified AI Engineer and Software Engineer with production experience in voice AI, ML pipelines, LLM fine-tuning and evaluation, and full-stack development.

Experience

Software Engineer **Remote**

Clipboard Sports *October 2026 - Present*

- Full-stack engineering for a sports technology startup, working directly with the founder and engineering team on the initial development roadmap across frontend, backend, and product.
- Own debugging, testing, and launch-readiness work on core product features.

Software Engineering Consultant **Remote**

SomatiX *October 2026*

- Led a release-readiness review of a React Native/Expo mobile app (TypeScript, Supabase, SQLite, REST APIs), assessing authentication, authorization, privacy, offline sync, data integrity, architecture, and reliability.
- Executed 42 controlled validation scenarios and delivered prioritized findings with technical evidence and a Codex-ready remediation plan.

Teaching Assistant **San Francisco, CA**

University of San Francisco *July 2026 - Present*

- Supported two graduate Data Science (MSDS) courses, with a third upcoming.

AI Engineer **Remote**

Asurion *January 2026 - June 2026*

- Built a voice turn detection system, improving auto-labeling accuracy from 50% to 88%+ (90%+ on a 400 sample validation set).
- Designed and scaled an automated labeling pipeline to auto-label 400k+ audio samples, enabling large-scale fine-tuning of a Whisper-based PyTorch model.
- Deployed the model in a real-time voice AI pipeline (LiveKit), enabling end-to-end conversational agent testing with low-latency inference.

AI Engineer **Remote**

Spotly Jobs *October 2025 - January 2026*

- Engineered ATS data pipelines using dlt and dbt, expanding job posting coverage by 5%+ and scaling automated processing to 500+ postings per pipeline run.
- Built 7 Dagster assets and sensors to automate ETL workflows, cutting manual engineering intervention by 50%+ and saving 10+ engineer-hours per week.
- Improved data ingestion throughput by 30–40% through optimized scraping logic and REST API handling, processing 150–200 additional postings per hour at no added infrastructure cost.

AI Engineer **Remote**

Outlier AI (Scale AI) *May 2024 - September 2025*

- Trained LLMs using Reinforcement Learning from Human Feedback, improving instruction-following accuracy by 20%.
- Evaluated 1M+ tokens across 5+ datasets, identifying 300+ instruction-following errors that directly informed targeted finetuning.
- Refactored 3+ AI/ML models to generate more precise and succinct output.

Software Developer **San Francisco, CA**

University of San Francisco *September 2024 - May 2025*

- Lead developer on IDEA team software development, delivering 3 full-cycle applications.
- Created 3 business/entrepreneurship GenAI Python apps, adopted by 50+ students and professors in coursework.

Software Developer **San Francisco, CA**

Founders Network *August 2024 - December 2024*

- Built Slack site integrations into an existing codebase of over 10,000 lines of code.
- Delivered 8 sprint cycles in an Agile environment with a 95% on-time delivery rate.

Software Developer **San Francisco, CA**

University of San Francisco *May 2024 - August 2024*

- Lead developer on a full-stack PeopleMuseum project app (React JS) with a 5,000+ line codebase and sub-2-second load times.
- Created and deployed 2 generative AI Thunkable apps, one of which is featured on PeopleCode.ai's front page.

Projects

Founder of BuildGist

- macOS AI code-explanation app for Claude Code, Cursor, and Codex runs, built on the Claude CLI and then Anthropic's API (Haiku 4.5, Sonnet 5), with severity-rated issue detection, cross-agent handoffs, and Stripe subscriptions: https://buildgist.com/
- Built an evaluation harness measuring factual accuracy, hallucinations, and planted-bug detection; benchmarked model quality, latency, and inference cost to drive model selection and gate server-backed releases on eval results.
- Verified with 2,491 application tests and 53 Rust tests passing at the latest checkpoint.

Founder of ResumeAI

- AI-Powered ATS Resume Optimizer (Next.js, TypeScript, React, Supabase/Postgres, Anthropic Claude API, Stripe, Chrome Extension): https://withresumeai.com/
- Founded and built (solo) a full-stack AI resume platform with ATS compatibility scoring, Claude-powered bullet rewriting, AI cover letter generation, PDF/DOCX export, and a companion Chrome extension; reached active users across 7+ countries with 80%+ week-over-week new-user growth.

ParkCast SF: End-to-End MLOps System for Parking Occupancy Prediction

- Shipped a production parking-occupancy API (FastAPI, Docker, GCP Cloud Run) serving predictions for 12.7K SF blocks at 8.98 MAE / 0.73 R^2 from a 33-feature LightGBM residual model.
- Built a fully automated MLOps retraining pipeline in GitHub Actions (DataSF ingestion, MLflow tracking, and a champion-challenger gate rescored on a shared test set) to block silent regressions before GCS upload and Cloud Run rollout.
- Engineered leakage-safe temporal features (lag windows, recency-weighted training, KNN-inferred block aggregates) to extend metered-only data to citywide coverage and improve event-hour accuracy.

Creator of PantrIQ

- Full-stack AI mobile app (React Native, TypeScript, TailwindCSS, Supabase, Google/Apple Auth, OpenAI) with scan, voice, and text input, AI recipe suggestions, meal planning, shopping lists, and pantry tracking.

AI/ML Industry Data Dashboard

- Live data dashboard aggregating AI/ML research from arXiv and Medium with automated GCS scraping, trend visualizations, and Anthropic-powered topic clustering, deployed on Google Cloud Run.

Creator of the PeopleCodeOpenAI Python library

- Python library for easy access to OpenAI's tools (text-to-speech, voice recognition, RAG), used in intro courses at the University of San Francisco: https://www.peoplecode.ai/

Open Source

Ninety-one PRs merged into third-party production repos, including OpenAI's Whisper and Google's SentencePiece, each merged by one of its authors, NVIDIA's NeMo and DALI, five into Microsoft's ONNX Script, Meta's FAISS, Hugging Face Transformers and IBM's Docling. More in review across Microsoft's MarkItDown and ONNX Runtime, DeepSpeed and scikit-learn.

Technical Skills

Languages: Python (PySpark, SparkSQL, PyTorch, Pandas, NumPy, Scikit-Learn, Matplotlib, Plotly), TypeScript, JavaScript, Java, C, SQL, NoSQL
AI/ML: Generative AI, Large Language Models (LLM), LLM fine-tuning, RLHF, LLM Evaluation, Prompt Engineering, RAG, Voice AI, Regression, Classification, Unsupervised Learning, Deep Learning
Web/Mobile: Next.js, React, React Native/Expo, FastAPI, Supabase/Postgres, SQLite, REST APIs, Stripe
Tools: Claude Code, Cursor, Codex, Git, GitHub, Bash, Docker, ETL Pipelines, Distributed Computing, AWS, GCP, MongoDB, Apache Airflow, Dagster, dbt, MLflow, LiveKit

Certifications

AWS Certified Cloud Practitioner, **Google Cloud Digital Leader**

Education

University of San Francisco — **San Francisco, CA**
M.S. in Data Science and Artificial Intelligence — *July 2025 - June 2026*

University of San Francisco — **San Francisco, CA**
B.S. in Computer Science — *August 2021 - May 2025*
